Haiyang Liao

🎓 M.S. in NJU, applying for Ph.D.

haiyangliao@smail.nju.edu.cn · liaohaiyang1534.github.io · (+86) 173-6221-6482

Education

- **M.S. in Geological Engineering** Sept. 2022 - June 2025 (expected)

  Nanjing University, Nanjing, China

  - Thesis (in preparation): *Urban karst collapse monitoring technology based on fiber-optic distributed acoustic sensing (DAS)*

  - Advisor: Professor, Dan Zhang

- **B.S. in Geology** Sept. 2018 - June 2022

  Anhui University, Hefei, China

  - Thesis: *Application of Ground Penetrating Radar (GPR) in surface collapse detection of solid waste deposits in landfill*

  - Advisor: Associate Professor, Qifeng Yin

Research

Interests

- DAS Seismology, Interdisciplinary Seismology Applications
- I aspire to continue studying and researching algorithms and programs in seismology, including applications of DAS in various settings such as groundwater monitoring, ocean bottom imaging and glacier monitoring.

Projects

- National Natural Science Foundation of China "Distributed Acoustic Sensing and Characterization of Urban Ground Collapse Development Process" Jan. 2021 - Dec. 2024

  - Major research focus during my master's studies, involving participation in experiments and research using DAS seismology.

- Jiangsu Province Transportation Science and Technology and Achievement Transformation Project "Research on Key Technologies for Engineering Geological Exploration, Environmental Safety and Structural Waterproofing of Nanjing Shangyuanmen Railway Cross-River Tunnel" June 2023 - Aug. 2024

  - Served as the student leader, responsible for designing the experimental plan, coordinating with multiple parties, implementing the field tests, processing data, and co-authoring the final report.

Experience

- Urban Ground Collapse Monitoring May. 2024 - now

  - Deployed fiber optic cables near campus wells to validate cavity detection with DAS.

  - Studied lateral detection ranges with DAS using the three-station interferometry method to address uneven noise.

- Optical Fiber Cable Coupling Methods Study May. 2024 - now

  - Installed fiber optic cables in campus with different coupling methods to compare imaging effects from active and passive sources.

- Karst Fracture Zone Detection in Mufu Mountain, Nanjing Jan. 2024 - Aug. 2024

  - Laid fiber optic cables on roads near Mufu Mountain, applying the frequency-Bessel method to detect fractured karst zones in dolomite.

- Numerical Simulation for Subsurface Cavity Detection Jan. 2023 - Oct. 2023

  - Used specfem3d/2d for simulations of shallow cavities to analyze DAS imaging responses.

Honors and Awards

- Outstanding Member of the Communist Youth League, Nanjing University 2024
- ACEI Star (Institute of Earth Environment Computational Engineering, Nanjing University) 2023
- Outstanding Volunteer at the National Annual Conference on Engineering Geology 2023
- Outstanding Member of the Communist Youth League, Anhui University 2021

Others

Activities

- 09/2024 The 12th China Optic Fiber Sensing Conference, Chongqing, China.
- 08/2024 The 10th Summer School on Algorithms and Programs in Seismology, Online Learning.
- 08/2023 The 9th Summer School on Algorithms and Programs in Seismology, Hohhot, China.
- 04/2023 National Annual Conference on Engineering Geology, Nanjing, China.

Skills

- Languages: Chinese (Native), English (TOEFL: preparing).
- Programming Languages: Python, Matlab, Shell.
- Technical Softwares: MASW, CC-FJpy, evodcinv, specfem3d/2d, GMT.
- Document / Presentation: LaTeX, Markdown, HTML, Office, Adobe.
