Haiyang Liao

🎓 M.S. in NJU, applying for Ph.D. in Seismology

🌐 liaohaiyang1534.github.io · ✉ haiyangliao@smail.nju.edu.cn · 📞 (+86) 173-6221-6482

Education

○ **M.S. in Geological Engineering**   Sept. 2022 - June 2025 (expected)
Nanjing University, Nanjing, China
- Thesis (in preparation): *Urban karst collapse monitoring technology based on fiber-optic distributed acoustic sensing (DAS)*
- Advisor: Professor, Dan Zhang
○ **B.S. in Geology**   Sept. 2018 - June 2022
Anhui University, Hefei, China
- Thesis: *Application of Ground Penetrating Radar (GPR) in surface collapse detection of solid waste deposits in landfill*
- Advisor: Associate Professor, Qifeng Yin

Research

Interests

○ **DAS seismology, Interdisciplinary seismology applications**
- I aspire to continue studying and researching algorithms and programs in seismology, including applications of DAS in various settings such as groundwater monitoring, ocean bottom imaging and glacier monitoring.

Projects

○ **Distributed acoustic sensing and characterization of Urban Ground Collapse development process**, *National natural science foundation of China (No. 42077233)*   Jan. 2021 - Dec. 2024
- **Principal Investigator**. Major research focus during my master's studies, involving participation in experiments and research using DAS seismology.
○ **Evaluation and countermeasures of engineering geological conditions for river-crossing tunnels under complex water-rich fault zones**, *Jiangsu province transportation science and technology and achievement transformation project (No. 2023G08)*   June 2023 - Aug. 2024
- **Principal Investigator**. Served as the student leader, responsible for designing the experimental plan, coordinating with multiple parties, implementing the field tests, processing data, and co-authoring the final report.

Experience

○ **Shallow subsurface void detection**   May. 2024 - now
- Deployed fiber optic cables near campus wells to validate cavity detection with DAS. - Studied lateral detection ranges with DAS using the three-station interferometry method to address uneven noise.
○ **Optical fiber cable coupling methods study**   May. 2024 - now
- Installed fiber optic cables in campus with different coupling methods to compare imaging effects from active and passive sources.
○ **Software development for surface wave imaging**   Apr. 2024 - Aug. 2024
- Developed preprocessing and postprocessing software for monitoring ground collapses using surface waves and ambient seismic fields.
○ **Karst fracture zone detection in Mufu Mountain, Nanjing**   Jan. 2024 - Aug. 2024
- Laid fiber optic cables on roads near Mufu Mountain, applying the frequency-Bessel method to detect fractured karst zones in dolomite.
○ **Numerical simulation for subsurface cavity detection**   Jan. 2023 - Oct. 2023
- Used specfem3d/2d for simulations of shallow cavities to analyze DAS imaging responses.

Honors and Awards

- Outstanding Graduate Student Cadre, Nanjing University — 2024
- Outstanding Member of the Communist Youth League, Nanjing University — 2024
- Star of the Advanced Computational Engineering Institute for Earth Environment (ACEI), NJU — 2023
- Outstanding Volunteer at the National Annual Conference on Engineering Geology — 2023
- Outstanding Member of the Communist Youth League, Anhui University — 2021

Others

Activities

- 11/2024 The 1st Distributed Fiber Optic Sensing Technology and Application Conference, Oral Pres.
- 09/2024 The 12th China Optic Fiber Sensing Conference, Chongqing, China.
- 08/2024 The 10th Summer School on Algorithms and Programs in Seismology, Online Learning.
- 08/2023 The 9th Summer School on Algorithms and Programs in Seismology, Hohhot, China.
- 04/2023 National Annual Conference on Engineering Geology, Nanjing, China.

Skills

- Languages: Chinese (Native), English (TOEFL: preparing).
- Programming Languages: Python, Matlab, Shell.
- Technical Softwares: MASW, CC-FJpy, evodcinv, specfem3d/2d, GMT.
- Document / Presentation: LaTeX, Markdown, HTML, Office, Adobe.
